Senior Incident Manager | Major Incident Response & SRE Leadership

- Senior Incident and SRE leader with deep expertise in managing high-severity production incidents across large-scale cloud environments (Azure, private & public clouds). At Amadeus IT Group, played a pivotal role in leading critical incident response, coordinating multi-disciplinary engineering and operations teams, driving rapid service restoration, and minimizing business impact for mission-critical data, application, and integration services.
- Proven track record (20+ years) orchestrating complex incident resolution, conducting thorough root cause analysis, and implementing preventive reliability improvements to enhance system resilience and uptime. Owned end-to-end incident communications, delivering clear, timely, and empathetic updates to technical teams, engineering leadership, executives, and customers, while developing and refining incident playbooks, communication templates, and response processes.
- Managed high-severity incident response for 15+ years, personally coordinating 1–2 SEV1 (critical) incidents per month and 5–15 customer-impacting SEV2 (severe) incidents monthly, consistently meeting MTTR targets.
- Maintained a 196–200 out of 200 Service Stability Index (SSI) — Amadeus's internal reliability scorecard tied directly to MTTR performance — for 12 consecutive years (2013–2025), reflecting sustained sub-20-minute MTTR on critical outages and sub-30-minute MTTR on degradations across 90%+ of incidents.

TECHNICAL SKILLS

Cloud & Container Platforms:	Azure, Kubernetes (v1.27+), Red Hat OpenShift (v4.x)
Cloud & IaC (Self-Directed/Portfolio Project):	AWS (EC2, S3, IAM), Terraform — hands-on via personal observability and infrastructure projects; <i>certifications in progress</i>
Observability & Monitoring:	Prometheus, Thanos, Grafana, PromQL, Splunk, ServiceNow
Programming & Automation:	Go, Unix/Linux Shell (bash/ksh/sh), Perl, PHP, GitHub Actions, Jira, Python, Resolve
Incident, Problem & Change Management:	ITIL, Blameless Post-Incident Reviews, On-Call Rotation, Cap. Planning
Databases:	Supported: Oracle, MariaDB, MySQL. Usage of SQL, MySQL, promQL
Tools:	Git/Github, JIRA, VMware ESXi, Docker, Kubernetes, BIRD, Deployment Manager, Jenkins pipelines
Frameworks:	IT Services Management (ITSM), Scaled Agile Framework (SaFe)
Operating Systems:	Linux RHEL, SuSe Linux, CentOS, Ubuntu, AIX, Mac OS, HP/UX
Other:	Docker, Git, Jira/Confluence, BMC Control-M, Agile/SaFe, Sharepoint High-Scale Load Spikes Management, Large-Scale Distributed Systems

PROJECTS

- ***Spearheaded a JIRA EPIC to enhance, consolidate, and standardize Cloud alerts:***
 - Presented to the organization's Development Department a model for standardized alerts (templates) to be used by the entire support organization and helped maintain these to adapt them to all levels required.
 - Spearheaded coordination to migrate alert events from internal "alerting system" into ServiceNow.
 - Pioneered, after "as-code" templates were created, to extend and amend standard alerts as needed (written in GO) using queries in PromQL via Thanos to trigger those alerts and building on-the-fly Grafana dashboards.

PROFESSIONAL EXPERIENCE

AMADEUS Global Operations Americas Inc.

Sr. Service Reliability Engineer (SRE) - Cloud Technologies,

2019 – 2026

Fully Remote Mar 2020 – May 2023 / Hybrid Jun 2023 - Mar 2026

- **Led high-impact incident response** as a senior member of the global incident & problem management team supporting 24/7 critical services for enterprise travel customers at Amadeus IT Group. Coordinated cross-functional engineering, operations, and support teams to rapidly restore service, consistently achieving 98–99% availability while protecting customer SLAs and internal SLOs/SLIs in a high-availability, globally distributed production environment.
- **Acted as incident coordinator and communicator** during major production incidents, delivering clear, timely, and structured updates to technical teams, engineering leadership, and business stakeholders. Ensured accurate situational awareness and maintained confidence during time-sensitive service disruptions affecting global customers.

- **Owned and delivered a major cross-team initiative** (JIRA Epic) that standardized monitoring alert templates and event handling workflows. This effort transitioned legacy proprietary alerting into enterprise-wide ServiceNow-based ITIL event and incident processes, significantly reducing alert noise, duplication, and false positives while improving operational efficiency and response consistency (adopted globally in 2021).
- **Designed, implemented, and continuously improved monitoring & alerting strategies** during a large-scale migration from legacy systems to Prometheus-based observability (Prometheus, Thanos, Grafana, PromQL). Created custom dashboards, alert rules, operational runbooks, and Microsoft Teams + ServiceNow integrations to enable faster detection, better fault isolation, and more effective incident response.
- **Contributed to post-incident root cause analysis and reliability improvements** by identifying recurring patterns, driving corrective actions, and helping refine detection and mitigation strategies to prevent recurrence of high-severity incidents in cloud-native and hybrid environments.
- **Served as primary incident management trainer and mentor**, officially delivering Amadeus Cloud Services (ACS) curriculum courses including “ACS Incidents and Recovery.” Trained and onboarded 25+ engineers and operators on incident handling best practices, recovery procedures, communication standards, and production diagnostics, directly raising team capability in high-pressure situations.
- **Provided hands-on operational leadership** for large-scale Microsoft Azure-based applications and globally distributed platforms across multiple availability zones and continents, ensuring business continuity while supporting both production and training environments.
- **Managed reliable execution of critical batch workloads** using BMC Control-M, maintaining strict operational discipline for time-sensitive business processes that directly impacted customer-facing services and revenue operations.
- **Used AI coding assistants** (GitHub Copilot, Claude, GPT-4) and RAG-based retrieval against internal documentation (Confluence, OPROCs) to accelerate troubleshooting and remediation via internal ticketing system, SNOW, Thanos alerts.
- **Operated effectively within Agile SAFe 5.x frameworks** (Certified SAFe 5 Practitioner) as part of an Agile Release Train (ART), using Jira for incident-related planning, retrospectives, and continuous process improvement initiatives focused on operational excellence.

Amadeus IT Group, S.A.

Lead Systems Engineer (UNIX/Linux),

2008 - 2019

Sr. Systems Engineer,

2004 - 2008

- **Led 24/7 global incident response** for mission-critical travel reservation and ticketing platforms serving airlines, agencies, and hotels worldwide. Supervised a 9-person team coordinating high-severity incidents, achieving consistent **99%+ availability** while minimizing customer and revenue impact in a highly regulated, always-on environment.
- **Served as Incident Commander / Incident Coordinator** (2013–2018) for major production incidents, directing cross-team response, driving real-time decision-making, and owning incident communications through to resolution.
- **Directed end-to-end major incident, problem, and change management** following ITIL best practices, driving root cause identification and preventive measures across thousands of production systems.
- **Managed high-availability operations** for complex, multi-continent clusters (Veritas Cluster Server, HP-UX, large-scale Linux farms), overseeing critical Oracle migrations, OS/software upgrades, and fault recovery — maintaining business continuity for multi-million Euro revenue-generating services.
- **Owned incident communications and escalation** during production disruptions, ensuring timely and clear updates to technical teams, leadership, and business stakeholders to maintain trust and alignment.
- **Developed automation and monitoring tools** (Perl, shell, PHP) to accelerate incident detection, diagnosis, and recovery, reducing MTTR and improving overall system resilience.
- **Resolved high-volume IBM MQ messaging incidents** using BMC PATROL and internal tooling, guaranteeing uninterrupted core business message flows at **>99% success rate**.

EDUCATION & CERTIFICATIONS

- **Masters of Executive Management in Business Administration (EMBA):** University of Florida, 2013
- **Masters of Computer Information Systems (MIS):** Nova Southeastern University, FL, 2007
- **Certifications:** AZ Fundamentals, FinOPs Foundation, AZ Data Fundamentals, SAFe 5 Practitioner, ITIL *Pursuing:* HashiCorp Terraform Associate, AWS Certified SysOps Administrator
