Portfolio: <https://madxxi.github.io/adam-portfolio/>

Lead SRE | Cloud Infrastructure & Observability | Major Incident Response

Site Reliability Engineering leader with 20+ years at Amadeus IT Group, one of the world's largest travel reservation networks, including 10 years as technical lead of a global 24/7 engineering team (2008–2018), mentoring 18 engineers into senior roles and contributing to 16 hires. Sustained a 196–200/200 Service Stability Index for 12 consecutive years with sub-20-minute MTTR on critical outages. Led the zero-downtime migration of 400+ applications to Red Hat OpenShift and Microsoft Azure, and an alerts-as-code initiative (Prometheus, Thanos, Grafana) that cut alert noise 50%. MBA; U.S. Army veteran.

PROJECTS

- *Originated and led an organization-wide reliability initiative to standardize cloud alerts:*
 - Presented to the organization's Development Department a model for standardized alerts (templates) to be used by the entire support organization and helped maintain these to adapt them to all levels required.
 - Spearheaded coordination to migrate alert events from internal "alerting system" into ServiceNow.
 - Pioneered "as-code" templates to create standard alerts as needed (written in GO) with PromQL via Thanos.

EXPERIENCE

AMADEUS Global Operations Americas Inc.

Senior Service Reliability Engineer (SRE) - Cloud Technologies

2019 – 2026

Fully Remote Mar 2020 – May 2023 / Hybrid Jun 2023 - Mar 2026

- Maintained a 196–200/200 Service Stability Index (SSI), Amadeus's internal reliability scorecard tied to MTTR, for 12 consecutive years (2013–2025), resolving 90%+ of incidents within target: sub-20-minute MTTR on critical outages and sub-30-minute on degradations.
- Led the multi-phase migration of 400+ applications and 2,600 Linux hosts from physical to virtual infrastructure, then to private Red Hat OpenShift (v3/v4) and public Microsoft Azure, decomposing the portfolio into 460+ microservices-based applications with zero customer-facing downtime and reducing provisioning time from 6 weeks to 48 hours.
- Led an organization-wide initiative that built a library of 100+ templated Prometheus/Thanos (PromQL) alert rules with Go-based tooling, auto-generated Grafana dashboards, and ServiceNow routing, cutting alert noise 50%, on-call pages by ~250/week, and deployment time from 120 to 15 minutes.
- Served as Incident Commander for ~36 Sev-1/Sev-2 incidents per year, coordinating 10–20+ interdependent application teams (inventory, reservations, ticketing, pricing, baggage) plus network, storage, infrastructure, and Microsoft vendor teams per incident under ITIL incident, problem, and change management; ran a blameless postmortem for every Sev-1/Sev-2, with corrective actions that reduced repeat incidents by 20% and lowered change failure rate from 15% to 1%.
- Trained and onboarded 25+ engineers as official instructor for the Amadeus Cloud Services (ACS) curriculum (ACS Induction; ACS Incidents and Recovery), shortening new-hire time to operational readiness from 12 to 2 weeks.
- Owned end-to-end reliability engineering for 460+ mission-critical production applications (reservations, ticketing, inventory, loyalty) in a 24/7 SaaS environment, meeting strict SLAs and SLOs for global B2B customers (airlines, hotels, cruise lines, car rental).
- Reduced average troubleshooting time on complex incidents by 15% by introducing AIOps practices, including AI-assisted diagnosis (GitHub Copilot, Claude, GPT-4) and RAG-based retrieval over Confluence runbooks and operational procedures; cut runbook creation for new ServiceNow alert types from 2 hours to 15 minutes.

Amadeus North America,

Sr. Systems Engineer & Lead Systems Engineer (UNIX/Linux)

2005 – 2008 / 2008 - 2018

- Served as technical lead for a global 24/7 team of 9 engineers without formal reporting authority, providing performance assessments that fed formal review cycles; mentored 18 engineers into senior roles over 10 years and cut team turnover by 25%.

- Served as Incident Commander (2013–2018) for ~15 major production incidents per year, directing cross-team response and stakeholder communications through resolution; led ITIL incident, problem, and change management with root-cause and preventive actions across thousands of production systems, reducing repeat incidents by 95% and change-related outages by 90%.
- Advised senior management on tooling, equipment, and team capacity investments, informing €100K in technology procurement and growth of the team from 4 to 9 engineers for expansion and succession planning.
- Played a central role in the technical interview process for engineering hires, conducting final-round assessments for 30+ candidates and contributing to 16 hires, with assessments carrying substantial weight in final hiring decisions.
- Owned operational stability and risk management for a €2.7B revenue-supporting environment of 5,500+ production and test systems (HP-UX, Linux), overseeing high-availability clusters (Veritas, MC/ServiceGuard) and leading 250 major OS and database upgrades while sustaining 99.99% uptime on clustered production services.
- Developed Perl and PHP monitoring and recovery tools that eliminated ~20 hours/week of manual checks; the tooling was showcased at sites in France and England and led to the formation of a dedicated alerting and monitoring team in 2014.

EARLY CAREER HIGHLIGHTS

- UNIX System Administrator, Rollins, Inc., Atlanta, GA Led high-impact production migration of national call-center environment from legacy HP-UX/Oracle to new platform without external contractors, delivering immediate stability improvements and \$10,000 in cost savings.
- Senior Personnel System & Database Administrator, U.S. Army, Fort Benning, GA Directed 5-person team supporting 19 servers; designed and streamlined network infrastructure that reduced operational effort by 14,000 man-hours per year and generated \$200,000 in resource-management savings. Enhanced division-level database prototype by 40%, driving \$28 million in annual Army-wide cost savings while training 200+ end users.

EDUCATION

University of Florida (2013): Masters of Executive Management in Business Administration (EMBA)

Nova Southeastern University, FL (2007): Masters of Computer Information Systems (MIS)

LICENSES & CERTIFICATIONS

- MS Azure Fundamentals
- FinOps Foundation
- **Pursuing:** HashiCorp Terraform Associate, AWS Certified SysOps Administrator
- MS Azure Data Fundamentals
- SAFe 5 Practitioner

SKILLS

- **Cloud Platforms:** Azure & RH Openshift : Kubernetes (v1.27.x)/ OpenShift (v4.1x)
- **Cloud & IaC (Self-Directed / Portfolio Projects):** AWS (EC2, S3, IAM), Terraform, hands-on via personal observability and infrastructure projects; certifications in progress
- **Incident, Problem & Change Management:** ITIL, Blameless Post-Incident Reviews, On-Call Rotation, Cap. Planning
- **Databases:** Supported: Oracle, MariaDB,MySQL. Usage of SQL, MySQL, promQL
- **Tools:** Git/Github, JIRA, VMware ESXi, Docker, Kubernetes, BIRD, Deployment Manager, Jenkins pipelines
- **Frameworks:** IT Services Management (ITSM), Scaled Agile Framework (SaFe)
- **Observability and Monitoring:** Thanos, Grafana, Splunk, Prometheus (Datadog-equivalent metrics/alerting stack)
- **Automation & Alerting:** ServiceNow (Service Mgt, incident escalation), Resolve (automation), Jira (Agile)
- **Operating Systems:** Linux RHEL, SuSe Linux, CentOS, Ubuntu, AIX, Solaris, Mac OS, HP/UX Windows
- **Languages:** Unix / Linux Shells Scripts, sed, Awk, PHP, Python, Perl, GO
- **Communications and Documentation:** Atlassian: Confluence & JIRA / MS: SharePoint, Yammer / wiki, Jabber
