SYSTEMS AND SERVICE RELIABILITY LEADER

Senior Site Reliability Engineer | Cloud Infrastructure & Observability | Azure & Private Cloud

Senior Site Reliability Engineer with 20+ years at Amadeus IT Group, one of the world's largest travel solutions providers, owning reliability for 460+ mission-critical applications. Sustained a 196–200/200 Service Stability Index for 12 consecutive years with sub-20-minute MTTR on critical outages, and served as Incident Commander for ~36 Sev-1/Sev-2 incidents per year. Led an alerts-as-code initiative (100+ Prometheus/Thanos rules, Go tooling, Grafana) that cut alert noise 50%, and the zero-downtime migration of 400+ applications to Red Hat OpenShift and Microsoft Azure. Extending into AWS and Terraform through hands-on portfolio work. U.S. Army veteran and former Secret clearance holder.

TECHNICAL SKILLS

Cloud & Container Platforms:	Azure, Kubernetes (v1.27+), Red Hat OpenShift (v3/v4)
Cloud & IaC (Self-Directed/Portfolio Project):	AWS (EC2, S3, IAM), Terraform — hands-on via personal observability and infrastructure projects; *certifications in progress*
Observability & Monitoring:	Thanos, Grafana, Splunk, Prometheus (metrics/alert stack)
Programming & Automation:	Go, Unix/Linux Shell (bash/ksh/sh), Perl, GitHub Actions, Python, Jsonnet
Incident, Problem & Change Management:	ITIL, Blameless Post-Incident Reviews, On-Call Rotation, ServiceNow
Databases:	Oracle, MariaDB, MySQL; SQL & PromQL
Tools:	Git/GitHub, JIRA, VMware, Docker, Canary Deployment, Jenkins
Frameworks:	IT Services Management (ITSM), Scaled Agile Framework
Operating Systems:	Linux RHEL, SUSE Linux, CentOS, Ubuntu, AIX, Solaris, Mac OS, HP-UX
Documentation/Other:	Confluence, BMC Control-M, Sharepoint, Yammer/wiki/jabber
Other Languages:	Spanish (fluent)

PROFESSIONAL EXPERIENCE

AMADEUS Global Operations Americas Inc. — **Remote: 3/20-5/23 / Hybrid: 6/23-3/26**

Senior Service Reliability Engineer (SRE) - Cloud Technologies — **Jan 2019 – Mar 2026**

- Planned and executed OpenShift upgrades across 35+ clusters hosting 135+ platform stacks in 5 regions and 15 availability zones, including a period of multi-cloud operation, for airline inventory, reservation, ticketing, and shopping workloads; used pre/post-deployment checklists and staged rollouts with zero customer-impacting incidents.
- Co-built a library of 100+ templated Prometheus/Thanos alert rules defined as code in Jsonnet, with Go tooling that validated cluster metadata (platforms, applications, services, customers, thresholds) and generated per-client Grafana dashboards and ServiceNow routing from templates; automated rollout with GitHub Actions and Bash, cutting on-call pages by ~250/week, deployment time from 120 to 15 minutes, and manual toil by ~10 hours/week.
- Maintained a 196–200/200 Service Stability Index (SSI), Amadeus' internal reliability scorecard tied to MTTR, for 12 consecutive years (2013–2025), resolving 95%+ of incidents within target: sub-20-minute MTTR on critical outages and sub-30-minute on degradations.
- Diagnosed recurring pod evictions in production clusters to root causes such as PVC capacity overruns, container memory leaks, and unhandled application errors, applied immediate fixes (volume expansion, data-retention rules, rollbacks) and drove permanent corrections that ended the recurrence.
- Implemented SLI/SLO frameworks and multi-window error-budget burn-rate alerting across 460+ mission-critical travel applications, cutting false-positive pages by 50% and focusing engineering effort on the highest-risk reliability work.

- Served as Incident Commander for ~36 Sev-1/Sev-2 incidents per year, coordinating 10–20+ interdependent application teams (inventory, reservations, ticketing, pricing, baggage) plus network, storage, infrastructure, and Microsoft vendor teams per incident under ITIL incident, problem, and change management. Ran a blameless postmortem for every Sev-1/Sev-2, identifying recurring failure patterns and driving corrective actions that reduced repeat incidents and lowered change failure rate.
- Reduced average troubleshooting time on complex incidents by 15% by introducing AIOps practices, including AI assisted diagnosis (GitHub Copilot, Claude, GPT-4) and RAG-based retrieval over Confluence runbooks and operational procedures; cut runbook creation for new ServiceNow alert types from 2 hours to 15 minutes.
- Led the multi-phase migration of 400+ applications and 2,600 Linux hosts from physical to virtual infrastructure, then to private Red Hat OpenShift (v3/v4) and public Microsoft Azure, decomposing the portfolio into 460+ microservices-based applications with zero customer-facing downtime and reducing provisioning time from 6 weeks to 48 hours.
- Trained and onboarded 25+ engineers as official instructor for the Amadeus Cloud Services (ACS) curriculum (ACS Induction; ACS Incidents and Recovery), shortening new-hire time to operational readiness from 12 to 2 weeks.

Amadeus North America
Lead Systems Engineer (UNIX/Linux), **2008 - 2018**
Sr. Systems Engineer, **2005 - 2008**

- Served as technical lead for a global 24/7 team of 9 engineers without formal reporting authority, providing performance assessments that fed formal review cycles, and significantly influencing hiring decisions; mentored 18 engineers into senior roles over 10 years and cut team turnover by 25%.
- Served as Incident Commander (2013–2018) for ~36 major production incidents per year, directing cross-team response and stakeholder communications through resolution; led ITIL incident, problem, and change management with root-cause and preventive actions across thousands of production systems, reducing repeat incidents by 95% and change-related outages by 90%**.**
- Owned operational stability and risk management for a €2.7B revenue-supporting environment of 5,500+ production and test systems (HP-UX, Linux), overseeing high-availability clusters (Veritas, MC/ServiceGuard) and leading 250 major OS and database upgrades while sustaining 99.99% uptime on clustered production services.
- Developed Perl and PHP monitoring and recovery tools that eliminated ~20 hours/week of manual checks; the tooling was showcased at sites in France and England and led to the formation of a dedicated alerting and monitoring team in 2014.
- Supported 10 Oracle version migrations and IBM MQ incident resolution across Dev, Pre-Prod, and Prod environments, completing all within planned maintenance windows with zero data loss.

EARLY CAREER AND MILITARY SERVICE

U.S. Army: Senior Personnel Systems & DBA | Rollins, Inc. (Orkin): UNIX System Administrator

- Led a 5-person Army team supporting 79 servers and coordinated 11 installation-wide software upgrades across 65 UNIX servers and 75+ workstations; held a Secret clearance.
- Improved data accuracy of a distributed Army database by 40% through cross-site synchronization; the design was adopted Army-wide and saved about $28 million in its first year.
- Simplified the Fort Benning installation network, eliminating 14,000 labor hours and $200,000 in costs per year.
- Migrated Rollins' production call-center environment from HP-UX 10.20/Oracle 7.3 to HP-UX 11.0/Oracle 8.1.7 in-house, saving $10,000, while also covering telecom and DBA duties.

EDUCATION & CERTIFICATIONS

- **Executive MBA:** University of Florida, 2013
- **Master of Science, Computer Information Systems:** Nova Southeastern University, FL, 2007
- **Certifications:** Microsoft Azure Fundamentals (AZ-900), FinOps Foundation, Microsoft Azure Data Fundamentals (DP-900), SAFe 5 Practitioner, ITIL Foundation.
  Pursuing: HashiCorp Terraform Associate, AWS Certified Solutions Architect - Associate
